

# How to run the process

1. First ensure that your config file in **Data/Config.xlsx** is updated with details and credential

	A	B	C
1	<b>Name</b>	<b>Value</b>	<b>Description</b>
2	StringListOfOrchestratorFolders	Shared	comma seperated string list of all folders in your orchestrator
3	RpaLocalRepositoryFolder	C:\RPA	where you would like all your rpa projects to be developed locally
4	CompanyName		Name of your company
5	CompanyEmailDomain		Your company domain email
6	GithubCreateRepoApiUri	https://api.github.com/orgs/ /repos	Git hub api end point to create repository in an organization
7	GithubAccessToken		Your Personal Access Token
8	GithubUsername		Your github username
9	GithubOrganizationName		The name of your organization
10			
11			

2. **Start the Process:** Run `Main.xaml` in UiPath Studio or from Orchestrator or UiPath assistant.
3. **Fill the Form:** Enter project details in the interactive form and click create

RPA Project Creator

Name Of Project \*

CandidateDetailsExtraction

Orchestrator Folder \*

Shared

Project Description \*

A given excel will be sent to a UiPath storage bucket and the robot retrieves this excel and extracts the data. the data would contain names of candidate. these names would be uploaded to a queue. the bot would go after each item on the queue which is a candidate name. navigate to the linked in page of the candidate and extract all the candidate details in a structured manner and send these details to a sql database. then go to the next candidate until all is finished

GitHub Repository Name

CandidateDetailsExtraction.RPA.UiPath.Process

Queue Name

CandidateDetailsExtractionQueue

Expected Credential Asset Name: CandidateDetailsExtraction\_SampleAppLoginCredential

Expected Storage Bucket: CandidateDetailsExtractionBucket

Should Create Queue?

☒ Yes
 ☐ No

Queue should have unique reference?

☒ Yes
 ☐ No

Create

Cancel

You enter your project name. the form enforces rules for project names based on best practice

You choose your orchestrator folder name that would house this project

Provide all details about the process in anyway you can as an AI would use this information to prepare your Readme.md and github repo description

This is auto populated for you

This is auto populated for you

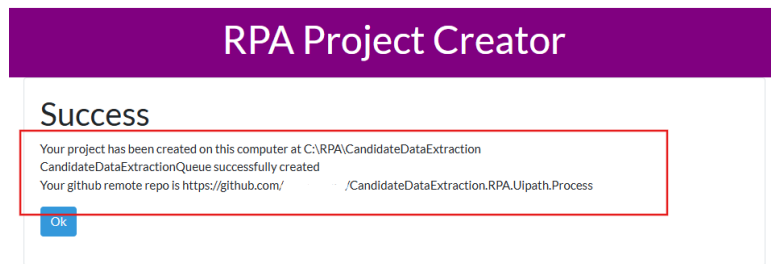

Indicate if a queue is needed and if the queue requires unique references

click to start

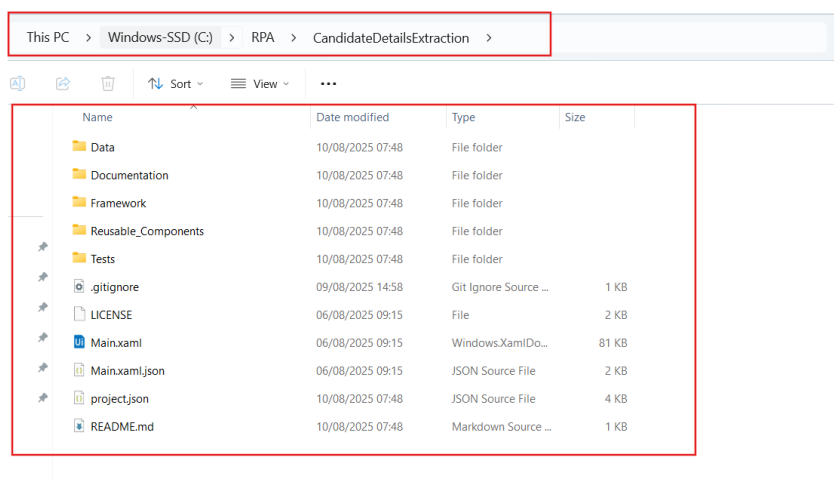

4. **Wait for job to finish:** Relax and let project creator automation work for you.

## 5. Complete: Review the success message and created resources

*Your Local Project Repo Created at the specified location on your **config.xlsx***

*Your remote GitHub repo created at the specified location*
